

Oldzhay Ahmed

Mill Bridge, Halstead CO9 2LP • +447404458430 • oldzhay.ahmed.work@gmail.com

IT Technician with hands-on experience in hardware upgrades, system configuration, and small network setups. Skilled in troubleshooting across Windows, macOS, and basic Linux environments, with a strong understanding of VPNs, VLANs, firewall rules, and port forwarding. CompTIA A+ certified, with additional training in cybersecurity and network administration. Known for a self-sufficient, problem-solving mindset and the ability to diagnose and resolve complex technical issues independently. Driven, adaptable, and passionate about building secure, optimized systems that work.

Experience

2023 – PRESENT

Freelance IT Support & Network Specialist

As a freelance IT support technician, I've worked on a wide range of home and small business technology projects. This includes configuring and securing local networks, setting up VPNs, implementing firewall rules, creating VLANs, and managing port forwarding. I've installed and maintained routers and switches to ensure stable connectivity and performed system upgrades such as transitioning hard drives from HDD to SSD to improve speed and performance. I've also conducted basic forensic analysis on digital files, such as detecting tampering in PDF documents and compiling reports outlining findings. My work spans troubleshooting both hardware and software issues across Windows and macOS environments, supporting clients both onsite and remotely through tools like TeamViewer and RDP. I've also applied foundational cybersecurity practices such as password recovery and basic threat analysis to help protect client data and systems.

APRIL 2024 – PRESENT

Production Operator | Technical Role | RM Curtis

In my current role at RM Curtis, I support production by operating and maintaining computer-controlled machinery used for food processing and packaging. I regularly identify and resolve system performance issues related to the machinery's internal databases and connectivity. This often involves diagnosing faults in the hardware interface, checking sensor alignment, and performing basic resets or configurations through onboard systems. I've contributed to reducing downtime by flagging and resolving recurring software glitches and by escalating firmware-related issues with clear technical documentation.

I also assist with updating digital production records and ensuring that internal software tools remain synchronized with real-time production outputs. This requires understanding system logs, maintaining consistent network connections to centralized systems, and adapting to procedural updates. While not a traditional IT role, the experience has sharpened my practical troubleshooting skills, attention to detail, and confidence in working with both digital and physical systems under operational pressure.

Skills

Systems & Platforms

Windows 10/11, macOS, Windows Server (basic), Linux (basic), BIOS/UEFI configuration

Hardware Support

System building, SSD/HDD upgrades, hardware diagnostics, driver installs, peripheral setup (printers, monitors, etc.)

Network Configuration

VPN setup, VLAN creation, port forwarding, firewall rules, DHCP, DNS, TCP/IP

Remote Support & Troubleshooting

TeamViewer, AnyDesk, RDP; software and hardware troubleshooting; malware removal; password recovery

Cybersecurity Fundamentals

Basic threat analysis, data protection best practices, encryption understanding, file forensics (PDF tampering detection)

System Administration (Beginner Level)

Active Directory (users/groups), Microsoft 365, G Suite, shared folder permissions

Programming & Scripting (Intro Level)

HTML, CSS, JavaScript, PHP, Python, C++

Tools & Utilities

Wireshark (basic), CMD & PowerShell (basic), Notepad++, Rufus, Speccy, CrystalDiskInfo

Education

SEPTEMBER 2022 – JUNE 2023

BTEC Level 2 in Computing

Covered core IT concepts including network configuration, server management, and basic programming. Practical work included managing shared folders, setting up user permissions, and diagnosing hardware and software issues. Introduced to multiple programming languages and markup languages including HTML, CSS, JavaScript, PHP, Python, and C++.

Certifications

CompTIA A+ Completed July 2025, **CompTIA Network+** (In Progress), **CompTIA Security +** (In Progress)
